INSTALL A TUFLOCK® SYSTEM AND

DOUBLE YOUR SWIMMING SEASON... FOR FREE

Install a TufLock DIY Thermal Solar Pool Heating system and you will not only double the average swimming season, but you will also save thousands by using the sun's free energy. This highly efficient system can increase water temperature by more than 10°C, allowing you to enjoy more pool parties, relaxed swims and happy kids.

Used in Australia for over 40 years, Thermal Solar Pool Heating systems are a reliable, cost-effective, and versatile heating option. Perfect for all roof designs, shapes, pitches, and sizes.

Experience more fun, entertainment and relaxation this summer with a TufLock DIY Thermal Solar Pool Heating kit!

WHY CHOOSE TUFLOCK® DIY SOLAR?

TufLock do-it-yourself (DIY) thermal solar pool heating kits have been designed for high performance heating and ease of installation. Each kit is fully customised to suit your requirements and supplied with a comprehensive plan and easy-to-follow instructions.

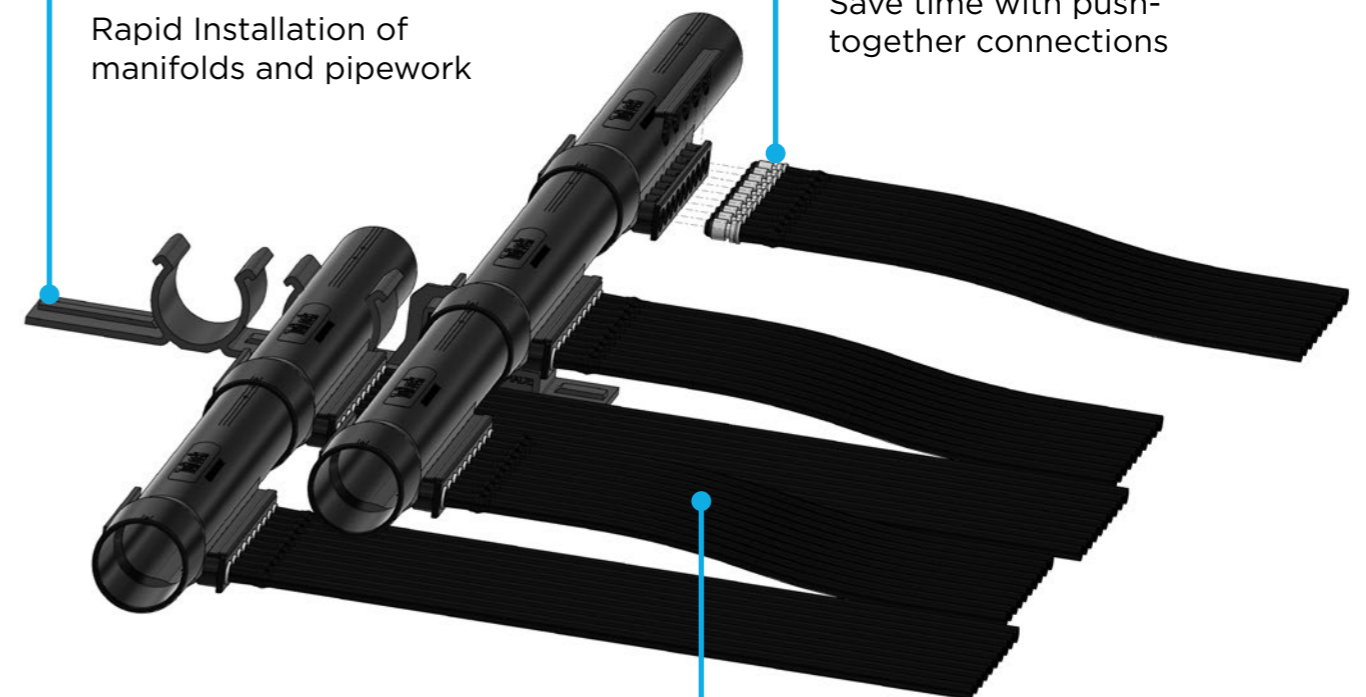

- High Heating Performance
- Fully Customised Kit
- Quick and Easy Installation
- No Specialist Skills or Tools
- Simple How-to Instructions
- Comprehensive Plan Provided

Secure Fixing System

Rapid Installation of manifolds and pipework

Easy Installation

Save time with push-together connections

Pre-Cut Collectors

Supplied at the right length to suit your needs

GETTING STARTED

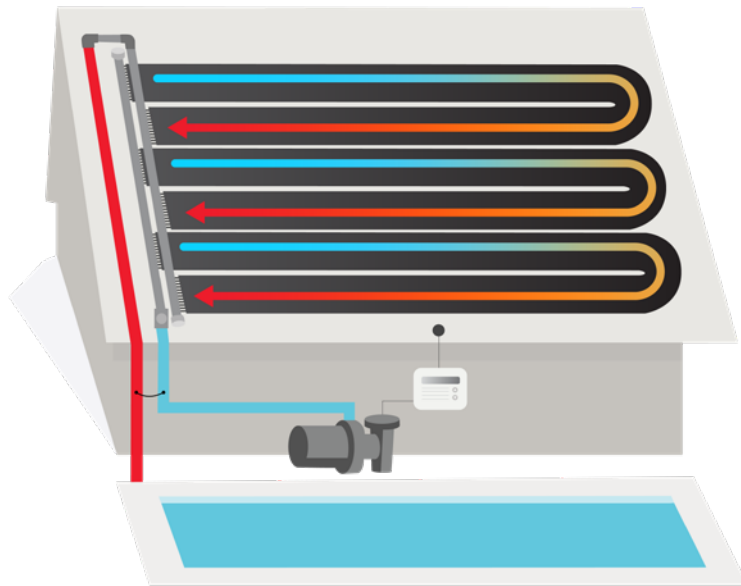

We take the guess work out of DIY solar! Every TufLock DIY kit is customised to perfectly fit your pool and roof. Just supply us with your address and we will develop a plan and quote that meets your needs.

Our kits come with everything you need for your DIY thermal solar pool heating installation.

*Please refer to the Boss Solar website for our standard Terms & Conditions and warranty documentation.

HOW DOES SOLAR WORK?

Thermal Solar Pool Heating is a simple and effective form of pool heating. Pool water is pumped through a series of tubes, known as a solar collector which is installed on your home, shed or other nearby building. The solar collector absorbs the sun's free heat and transfers it to the pool water that is being pumped through it. This heated water is then returned back to the pool.

You can automate the heating process by installing a digital solar controller, which monitors the roof and pool temperatures and automatically switches the system on and off to ensure maximum heating efficiency.
